Electroplated Finishes

Electroplating offers you the best of both worlds, giving you a luxurious look, with higher corrosion and weather resistance, without the hefty price tag. The electroplating process coats the metal with the effect of your choice (see below) and the precision laser cut technique creates a consistent finish across the letter, giving the appearance that the full letter is made from a luxury material.

Anodised Finishes

Anodised finishes create a distinctive brushed and grained appearance, delivering a finish that is both striking and refined. The process enhances the surface of the metal, resulting in a consistent and durable solution suitable for a wide range of applications.
