

As manufacturers with almost 30 years of experience in the signage and architectural lighting industry, we have developed a great network of suppliers and partners that allow us to keenly explore product sustainability. Our 6 acre manufacturing facilities and team of craftsman and sustainability advocates, put Applelec in the unique position to be able to work with our customers to Eco Engineer our products, coming up with more environmentally friendly solutions to match your project needs.

Get in touch with our eager team to discuss your latest project and they will utilise the force of Applelec to research and investigate the sustainable options, right for your project.

Just some of the materials you can choose from:

- 100% recycled and recyclable acrylic in a variety of colours and finishes such as metallic and stone effects
- Recycled wood pulp, rigid backing
- 80% recycled reclaimed post production waste Foamex
- Recycled plastic bottle skins printed with water based ink
- PVC free vinyl in a small range of colours
- 100% recyclable display board which contains a minimum of 25% recycled material
- The industries first sustainable light panel, Applelec Green LED Light Sheet
- Range of highly energy efficient LEDs saving you up to 30% on running costs with industry leading warranties
